BluEarth Renewables Inc. is committed to engaging stakeholders and community members in the decision-making process for our projects and working together with honest and transparent communications. We are sending this newsletter to provide an update on the development of our Des Sources Wind Project located in the Municipalities of Danville, Saint-Georges-de-Windsor and Wotton. Throughout the development phase of the project, we are being assisted by Québec firm Plan A Capital.

Project Update

In September 2023, we announced the decision not to submit a proposal as part of the Hydro-Québec 2023 Call for Tenders. The response timeline, being the shortest in the history of Québec's wind energy procurements, was not sufficient to provide stakeholders with enough time to properly review the project. Since then, we have continued pre-feasibility and consultation work, in preparation for the next Hydro-Québec Call for Tenders, which has not yet been announced. This work includes discussions with landowners in the study area, installation of wind measurement equipment, and meetings with stakeholders and potential community partners.

During the period between now and the next proposal to Hydro-Québec, we will continue to develop the project. This work includes feasibility engineering, environmental and technical studies to inform the overall design of the project. We are also planning additional stakeholder meetings, newsletters, and a second public open house. Our consultation efforts will continue through the life of the project, if we are selected by Hydro-Québec, as part of the following project schedule:

We want to hear from YOU!

Your feedback on the Des Sources Wind Project is very important to us. We encourage you to share your thoughts, questions, comments or suggestions by responding to our short survey. Scan the QR code with your smartphone camera to access to visit: : <https://www.surveymonkey.com/r/des-sources-en>

Community Benefits

We are committed to giving back to the communities where we live, work, and operate, and your feedback is critical in determining what is most meaningful to the community. Community benefits could include initiatives such as: scholarships / bursaries, support for environmental stewardship programs, local hospitals, recreational area improvements, education programs, social supports, etc. We invite you to share your thoughts via the survey link on the reverse side.

In addition to ongoing community benefits, the project will provide additional benefits including guaranteed annual income to the municipality, profit sharing for community partners, employment during construction and full-time positions to support the operations and maintenance of the wind facility. Learn more about all the community benefits on our project website.

Opening of our new office in Val-des-Sources !

Our new office has officially opened its doors at 263, 1st Avenue, right in the heart of Val-des-Sources. This marks a significant milestone and we look forward to meeting with stakeholders and citizens, and being a part of your community.

WANT TO LEARN MORE ABOUT THE PROJECT AND SHARE YOUR THOUGHTS WITH US?

Our last open house took place in August 2023. We will be hosting another open house event in 2024 to allow the community to learn more about the des Sources Wind Project and to provide their feedback.

We also invite you to look at the MRC des Sources' information and consultation approach to energy transition.

To ask questions, provide feedback or book a meeting with our team, please reach out to us via email at projects@bluearth.ca or call us at 844-214-2578. We look forward to discussing the project with you and listening to your feedback.

BluEarth Renewables brings together extraordinary people with the power to change the future™ by delivering renewable energy to the power grid every day. We are a leading, independent, power producer that acquires, develops, builds, owns and operates wind, hydro, solar and storage facilities across North America. Our portfolio includes over 1 GW_{AC} (gross) in operation, under construction and contracted pre-construction, and over 7 GW of high-quality development projects that are actively being advanced.
